

## How To Mount Twist Shifter On Wisent Handlebar

Use Allen Key 8 or pencil to guide the inner tube to the appropriate place.

Place the 3M screw thread in the oblong hole and remove the Allen Key.

Add the Twist Shifter. Take care that the Twist Shifter ring and the inner tube are on top of each other. Fix the inner tube via 3M screw. Tighten 3M screw with Allen Key 2 (max. 0.5Nm).

There are two oblong holes to fix the inner ring. In order to mount the Twist Shifter without interruption it is possible to turn Twist Shifter ring and inner tube 180°. In this case the wires will go through the inner tube to the center of the cockpit.
